

Arya Rizal Nurhakim

Software Engineer
Frontend • Mobile • Fullstack

+6285219505449 | aryarizal.dev@gmail.com | Indonesia

Profile

Software Engineer specializing in modern frontend development with additional experience across mobile and full-stack engineering. Experienced in building scalable web and cross-platform applications using React, Next.js, Flutter, TypeScript, and modern development practices. Comfortable working across the full software development lifecycle—from architecture and API integration to performance optimization and deployment—while collaborating with product, design, and backend teams to deliver high-quality software.

Skills

- Node JS
- Next JS
- Bun JS
- React JS
- Payload CMS
- Vue JS
- Flutter
- Firebase
- Dart
- HTML
- CSS
- Tailwind

Work Experiences

Front End Developer — Itqan Sharia Cooperative (Contract) 2021 – 2023

- Converted UI/UX design assets into clean, accurate, and maintainable front-end layouts.
- Developed a fully responsive interface that adapts smoothly to various devices and screen resolutions.
- Collaborated with the backend team to integrate APIs, handle data retrieval, and submit user information efficiently.
- Implemented SEO enhancements to improve search visibility and overall web performance.

Upwork / Independent Contractor | 2023 – Present

- Delivered scalable web, mobile, and full-stack solutions for startups and enterprise clients using **React, Next.js, Flutter, TypeScript, Node.js, and Firebase**.
- Built responsive, pixel-perfect user interfaces from Figma and UI/UX designs for both web and cross-platform applications.
- Developed and integrated RESTful APIs while collaborating closely with backend engineers, including API contract design and implementation.
- Built complex application features including authentication, payment workflows, chat systems, order management, location-based services, and transaction history.

- Developed AI-powered SaaS products using **Next.js 15**, **ShadCN UI**, **Tailwind CSS**, **Payload CMS v3**, **PostgreSQL**, **Upstash**, and **Vercel AI SDK**.
- Implemented **Server-Side Rendering (SSR)**, **internationalization (i18n)**, SEO optimizations, and reusable component architectures to improve performance and scalability.
- Integrated cloud services including **Firestore Authentication**, **Firestore Cloud Messaging (FCM)**, **Google Maps API**, and **Resend** for authentication, notifications, mapping, and transactional emails.
- Designed technical solutions, documented system architecture and application flows, and collaborated with cross-functional teams throughout the software development lifecycle.
- Optimized application performance through efficient state management, caching strategies, rendering improvements, and continuous debugging across multiple platforms.
- Configured CI/CD pipelines, deployment workflows, and production monitoring using **Vercel** and **Sentry** to ensure reliable software delivery.
- Developed and maintained a large-scale super app consisting of multiple business modules, delivering scalable architecture, reusable components, and a consistent user experience across the platform.
- Built internal developer tools and debugging utilities to streamline development workflows, improve issue diagnosis, accelerate QA processes, and enhance overall engineering productivity.

Pendidikan

- **Taruna Bakti High School** 2017 - 2020
- **S1 Computer Science - Bina Nusantara University** 2020 - 2024
